IN THE CLAIMS:

Please amend the claims as follows.

1. (Currently Amended) A method for increasing the thermal stability of a well fluid comprising:

mixing an effective amount of a miscible amine in the well fluid in an absence of a cross linkant, wherein the well fluid comprises a viscosifying synthetic polymer, and wherein the well fluid and is a non-oleaginous liquid, wherein the miscible amine comprises triethanol amine, and wherein the well fluid maintains viscosity when subjected to an elevated temperature.

- 2. (Currently Amended) The method of claim 1, wherein the miscible amine <u>further</u> comprises an amine selected from the group consisting of primary, secondary and tertiary amines, and mixtures thereof.
- 3. (Original) The method of claim 1, wherein the miscible amine comprises about 0.2% to about 20% by weight of the well fluid.
- 4. (Original) The method of claim 3, wherein the miscible amine comprises about 0.6% to about 12% by weight of the well fluid.
- 5. (Original) The method of claim 3, wherein the synthetic polymer comprises about 0.3% to about 5% by weight of the well fluid.
- 6. (Original) The method of claim 4, wherein the synthetic polymer comprises about 0.6% to about 2.6% by weight of the well fluid.
- 7. (Currently Amended) A method for increasing the thermal stability of a well fluid comprising:

mixing an effective amount of a miscible amine in the well fluid, wherein the well fluid comprises a <u>viscosifying</u> synthetic polymer <u>and is a non-oleaginous</u>

<u>liquid</u>, and wherein the <u>viscosifying</u> synthetic polymer comprises polyethylene glycol, wherein the miscible amine comprises triethanol amine, and wherein the well fluid maintains viscosity when subjected to an elevated temperature.

- 8. (Canceled)
- 9. (Currently Amended) A method for increasing the thermal stability of a well fluid comprising:

mixing about 0.2% to about 20% by weight of a miscible amine into the well fluid in an absence of a cross-linkant, wherein the well fluid comprises a viscosifying synthetic polymer, and wherein the well-fluid and is a non-oleaginous liquid, wherein the miscible amine comprises triethanol amine, and wherein the well fluid maintains viscosity when subjected to an elevated temperature.

- 10. (Currently Amended) The method of claim 9, wherein the miscible amine <u>further</u> comprises an amine selected from the group consisting of primary, secondary and tertiary amines, and mixtures thereof.
- 11. (Currently Amended) A method for increasing the thermal stability of a well fluid comprising:

mixing about 0.2% to about 20% by weight of a miscible amine into the well fluid, wherein the well fluid comprises a <u>viscosifying</u> synthetic polymer and is a non-oleaginous liquid, and wherein the <u>viscosifying</u> synthetic polymer comprises polyethylene glycol, wherein the <u>miscible amine</u> comprises triethanol amine, and wherein the well fluid maintains viscosity when subjected to an elevated temperature.

12. (Original) The method of claim 10, wherein the synthetic polymer comprises about 0.3% to about 5% by weight of the well fluid.

- 13. (Canceled)
- 14. (Currently Amended) A thermally stable well fluid comprising:
 - a viscosifying synthetic polymer; and
 - an effective amount of miscible amine admixed with the <u>viscosifying</u> synthetic polymer in an absence of a cross-linkant,
 - wherein the well fluid is a non-oleaginous liquid, wherein the miscible amine comprises triethanol amine, and wherein the well fluid maintains viscosity when subjected to an elevated temperature.
- 15. (Currently Amended) The method of claim 14, wherein the miscible amine <u>further</u> comprises an amine selected from the group consisting of primary, secondary and tertiary amines, and mixtures thereof.
- 16. (Original) The well fluid of claim 14, wherein the synthetic polymer comprises polyethylene glycol.
- 17. (Canceled)
- 18. (Original) The well fluid of claim 14, wherein the miscible amine comprises about 0.2 % to about 20% by weight of the well fluid.
- 19. (Original) The well fluid of claim 18, wherein the miscible amine comprises about 0.6% to about 12% by weight of the well fluid.
- 20. (Original) The well fluid of claim 18, wherein the synthetic polymer comprises about 0.3% to about 5% by weight of the well fluid.
- 21. (Original) The well fluid of claim 19, wherein the synthetic polymer comprises about 0.6% to about 2.6% by weight of the well fluid.

22. (Currently Amended) A method of treating a well comprising:

injecting a well treating fluid into the well, wherein the well treating fluid comprises a viscosifying synthetic polymer and an effective amount of a miscible amine, in an absence of a cross linkant, and wherein the well treating fluid is a non-oleaginous liquid, wherein the miscible amine comprises triethanol amine, and wherein the treating fluid maintains viscosity when subjected to an elevated temperature.

- 23. (Currently Amended) The method of claim 22, wherein the miscible amine <u>further</u> comprises an amine selected from the group consisting of primary, secondary and tertiary amines and mixtures thereof.
- 24. (Original) The method of claim 22, wherein the synthetic polymer comprises polyethylene glycol.

25. (Canceled)

- 26. (Original) The method of claim 22, wherein the miscible amine comprises about 0.2% to about 20% by weight of the well treating fluid.
- 27. (Original) The method of claim 26, wherein the miscible amine comprises about 0.6% to about 12% by weight of the well treating fluid.
- 28. (Original) The method of claim 26, wherein the synthetic polymer comprises about 0.3% to about 5% by weight of the well treating fluid.
- 29. (Original) The method of claim 27, wherein the synthetic polymer comprises about 0.6% to about 2.6% by weight of the well treating fluid.
